

Customer Meeting Report

20/10/2023

Attendees:

- Stéphane DUGUET (Thales)
- Baptiste BELLIER
- Alexis BONAMY
- Marie BORDET
- Aurélie CHAMOULEAU
- Paul TRÉMOUREUX
- Benoît VAVASSEUR

Progress report:

- Test entered on Squash
- The team held its sprint retrospective on Thursday afternoon.
- Sonarlint's rules have been configured with quality expectations to improve the existing code and the quality of our work.
- GitLab CI/CD implementation in progress
- Sonarqube implementation in progress
- US #20 (peak hour simulation check) in progress, code understood and bugs resolved, but functionality has not been properly implemented and needs to be created.
- US #24 (*verify station closure*) in progress
- US #28 (*verify line closure*) in progress, problems reported and being resolved
- US #32 (*run simulation from HMI*) done and waiting validation
- TS #33 (*refactorize actionManager*) done and waiting validation
- TS #34 (*HMI quality*) done and waiting validation
- TS #35 (*simulator quality*) almost done, will be finished very soon

Questions to customer:

Technical questions:

- What's the most important feature between improving the customer experience on the HMI and editing the simulation configuration via the HMI? The question is asked to establish priorities for the next US.

Customer's questions:

- The customer asked whether the program worked according to the configuration of each team member, and whether performance was sufficient to enable good working conditions. Both answers were positive: no one had any problems running the program in any way.
