Customer Meeting Agenda
10/11/2023

Progress report:
- A new version of the PAQL has been drafted, improving on the previous one. It has been signed by each team member.
- A runner has been installed on the Git.
- US #10 (*modify simulation configuration from HMI*) developed, tested and documented. Pending validation.
- US #12 (*distribution of zone users by destination*) developed, currently in test phase.
- US #20 (*manage peak attendance*) developed, currently in test phase.
- US #24 (*management station closure*) has been developed, tested, documented and merged. This US is closed.
- US #28 (*management line closure*) under development.
- TS #35 (*simulator quality*) developed, tested and documented. Pending validation.
- TS #36 *(configuring Maven on the project to facilitate installation)* in progress.

Questions to customer:

Technical questions:
- As far as distribution is concerned, the following fields have been created: residential, commercial, office, industrial, tourism, leisure, school.
    - Are there too many fields?
    - Are there any unnecessary fields?
    - Are any fields missing?
- Still on the subject of distribution, some decimals have been implemented. Is this possible, or will there only be integers?
